New Features

19.1

Contents

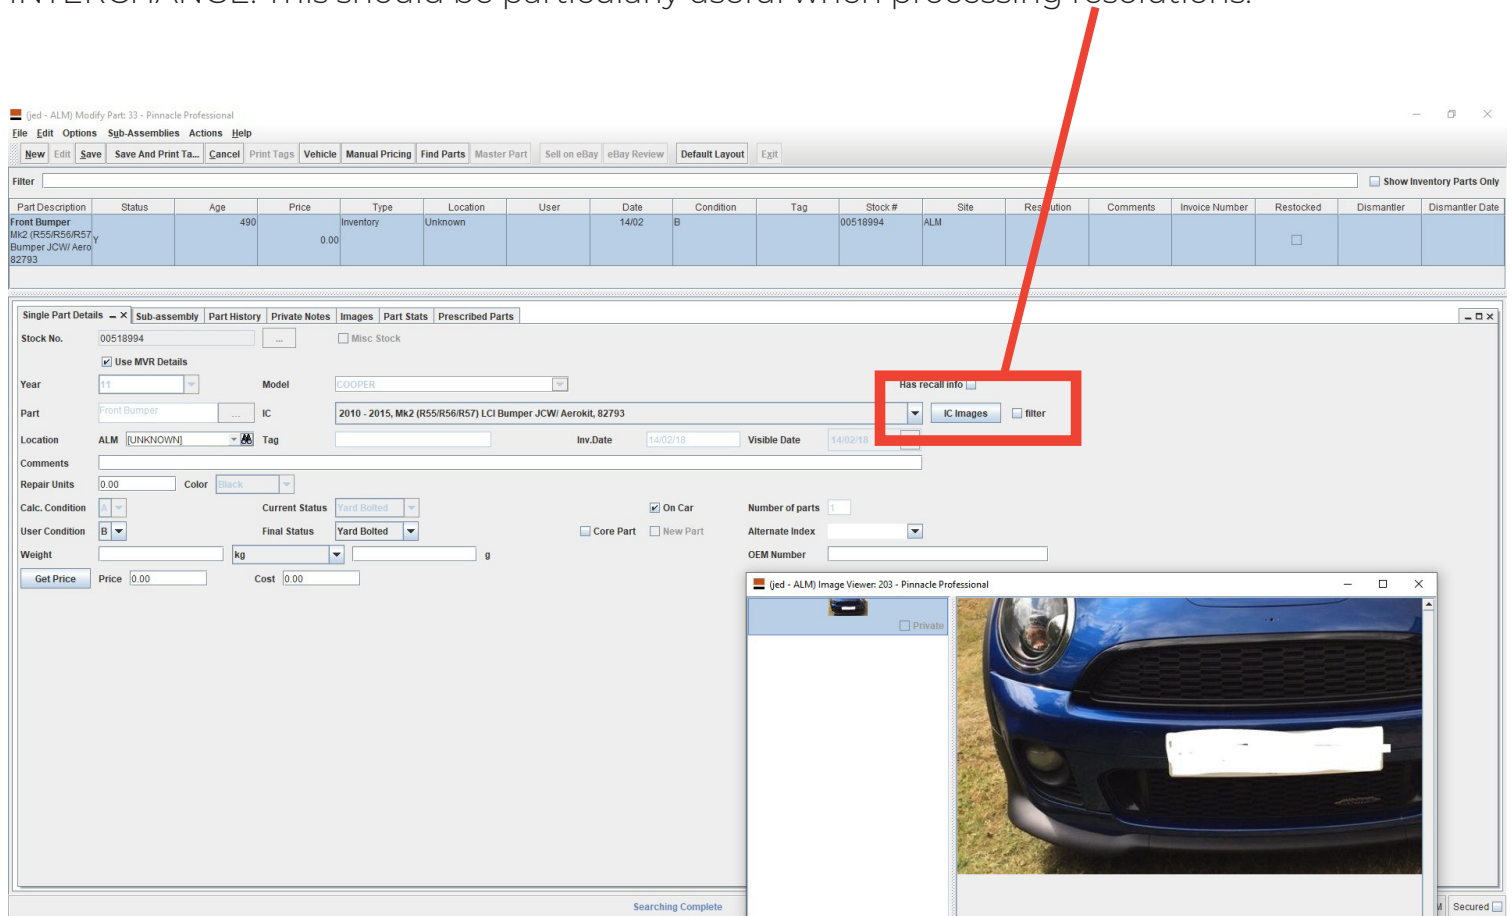

Features

1. IC images for parts on Modify/Edit part screens
2. Tag number creation for all parts when added to inventory
3. Modify 'find parts' to find unresolved parts even when searching for a specific Interchange
4. Recall System - AU Only (Subscription Required)
5. Parts in resolution can be put on a Work Order
6. Show part stats on same line as part on MVR/Parts tab

19.1 Release Notes

1. IC images for parts on Modify/Edit part screens

To assist with the identification of parts, there is now an “IC Images” button on the Modify/Edit Parts screen, which you can click to see any images associated with that PART and INTERCHANGE. This should be particularly useful when processing resolutions.

2. Tag number creation for all parts when added to inventory

You can now create a tag number for all parts when added to inventory (including 'Y' (YARD) and 'U' (UNBOLTED) parts).

Ensure that 'Automatically assign a tag number to new inventory' is switched on in Management > Preferences to initiate this feature.

Tag printing screen now shows parts that have never had a tag printed previously.

3. Modify 'find parts' to find unresolved parts even when searching for a specific Interchange

A new preference is available 'Add an unresolved search when adding an item/IC search'.

When this preference is switched on, when a part is searched via Interchange (IC), an additional search criterion will be added which will search for unresolved parts for that model/part and selected IC's year range.

This will allow users to see parts that are perhaps difficult to resolve until they are actually dismantled so were inventoried as unresolved.

In the 'Found Parts screen', unresolved parts can be colour coded when they are displayed to help separate them from fully resolved parts.

You can choose the colour from the menu Utilities > Switch Look and Feel.

4. Recall System AU only (Subscription Required)

It is now possible to check if a vehicle in your Pinnacle system has a recall notice issue against it. For more information on the recall system please contact AU support.

5. Parts in resolution can be put on a Work Order

When converting a quote, the user is now alerted if there are any parts on the order that are in resolution or have recall notices (AU only).
